

# Espionage Equipment

The following equipment was invented/used during the Late 1930's and throughout World War II. None of these items have a "Cost" as they are not commonly available.

**Aviator Watch.** This is a standard oversized aviator watch with one minor modification. The wind/time set dial is designed to be pulled out and has an attached two foot piano wire, designed to be used as a garrote.

**Pocket Watch.** This is a standard silver pocket watch, designed with a false back. Within the back are two small wires and detonators, designed to be used as a timer device for use with the Nobel 808 plastic explosive.

**Combat Belt.** This heavy leather belt is equipped with different hidden items. First, the belt buckle is a slip knife. It is a simple weapon, cannot be thrown, and does 0L damage.

Second, there are 25 British Gold Sovereigns ("Kings") hidden in it and third, there are is a small quantity of Nobel 808 (plastic explosive). There is enough explosive here to break an iron lock (or cell door lock), blow open a standard door, or perhaps disable a normal vehicle. It is a Tough (3) Difficulty if actively searching someone to find any of these items.

**Pistol Pen.** This working heavyweight "Gentleman's Fountain Pen" has a hidden pistol cartridge and trigger mechanism which contains a .380 cartridge.

The pistol is single shot, does 1L damage, and has a Range of 10 feet. The pistol can be reloaded as an attack action, but cannot be disguised as a normal pen after being fired.

**Sykes-Fairbarin Commando Knife.** One of the best combat knives ever developed, this weapon is made from hardened steel and is virtually unbreakable. Its Strength/Speed/Weight are the same as that of a normal

Dagger, but has a Damage of 2L due to it's exceptional quality.

**Fedora.** This appears to be a normal men's hat (available in several colors and textures-rough "weathered" look is extra), but it has a few hidden items within it. First, it has a small set of high quality Lockpicks

hidden within the internal head band. Second, it has a curved blade knife hidden with the outer headband (cannot be thrown and does 0L damage) and third, it has a small compartment used for smuggling small pieces of paper or film negatives. It is a Tough (3) Difficulty if actively searching someone to find any of these items.

**Riga Spy Camera (Minox).** This small camera (3/4" tall by 3-1/2" wide x 1" deep) uses an 8 x 11 mm negative film with no flash. It can take up to 8 pictures on one roll (and must be changed in a dark room).

**Douglass Lighter.** This normal looking lighter comes in two varieties, one is equipped with a storage compartment for film or notes, the other is paced with gunpowder or Nobel 808 and can be used as an improvised explosive to open a locked door or jail cell.

**Utility Shoe.** This normal looking pair of men's shoes is equipped with several small storage compartments. Space in either heel can be used to store objects the size of a .45 caliber bullet in thickness (a total of 4 bullets could be stored in either heel) and a narrow space in the tongue can store film or notes. It is a Tough (3) Difficulty if actively searching someone to find any of these items.
